## FORMATION DATA SCIENTIST

PROJET 5: SEGMENTEZ DES CLIENTS D'UN SITE E-COMMERCE

Soutenu par: Kourouma Sekouba Aissatou

## SOMMAIRE

- 1 MISSION
- 2 PRESENTATION DU JEU DE DONNÉE
- 3. ANALYSE EXPLORATOIRE
- 4. CREATION DU FICHIER CLIENT
- 5. ACP
- 6. ALGORITHME K-MEANS
- 7. CLUSTERING HIÉRARCHIQUE
- **8 ALGORITHME DBSCAN**
- 9. TESTER UN CLUSTERRING K-MEANS AVEC LES VARIABLE QUALITATIVES
- 10. ETUDE DE LA STABILITÉ TEMPORAIRE
- 11. CONCLUSION

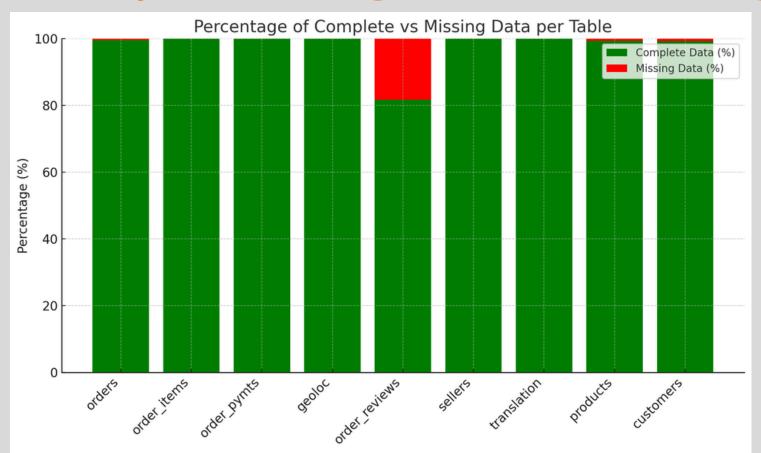

## 1. MISSION

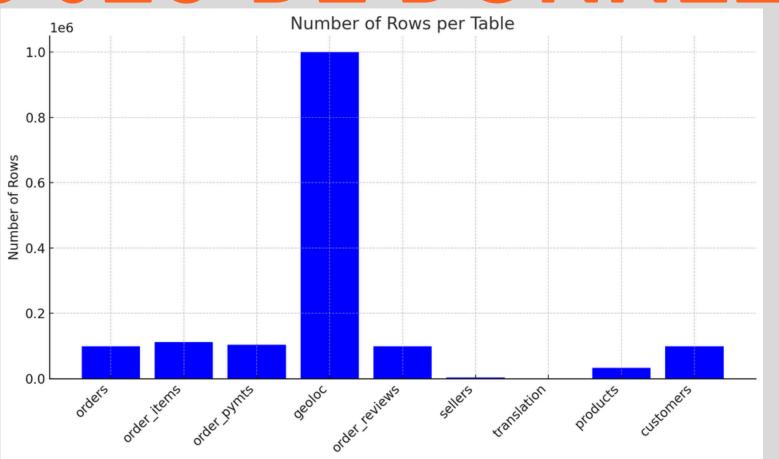

Créer une segmentation client exploitée par l'équipe Marketing pour personnaliser les campagnes et améliorer l'engagement.

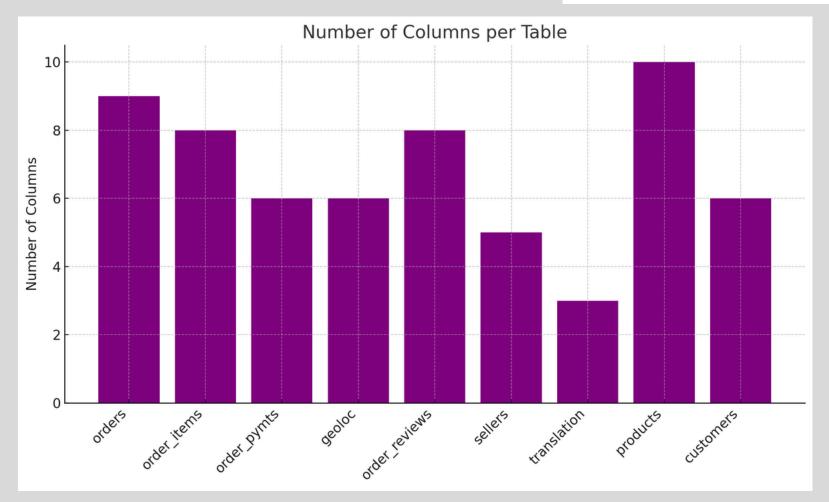

- Comment assurer que la segmentation client permettra à l'équipe Marketing de cibler efficacement chaque segment avec des offres personnalisées tout en optimisant les ressources
- Comment intégrer efficacement les variables qualitatives, comme la satisfaction, dans la segmentation en complément des données quantitatives ?
- Comment créer une segmentation dynamique qui reflète l'évolution des comportements clients et reste pertinente à long terme, avec une fréquence de mise à jour adaptée ?

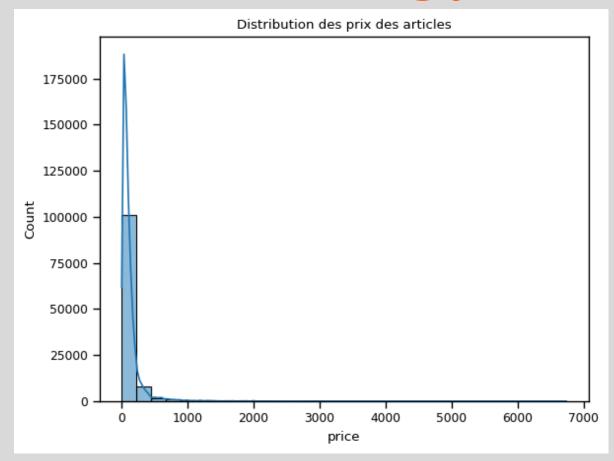

# 2. PRESENTATION DU JEU DE DONNÉE

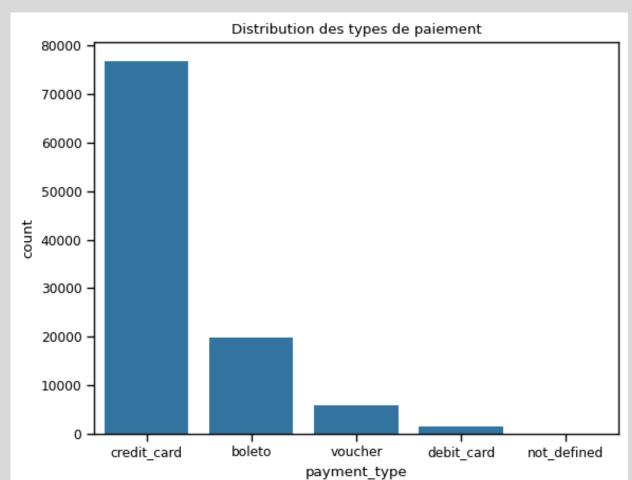

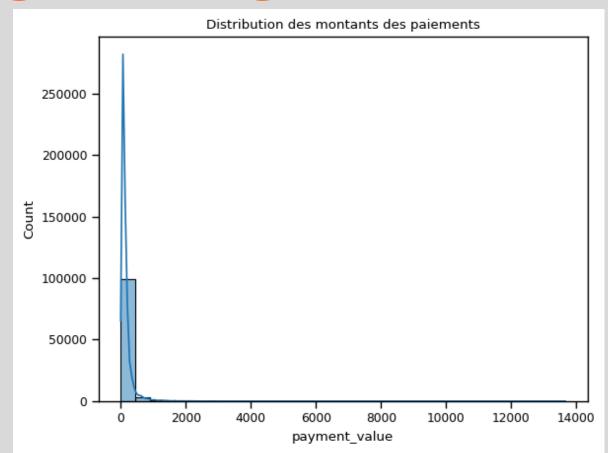

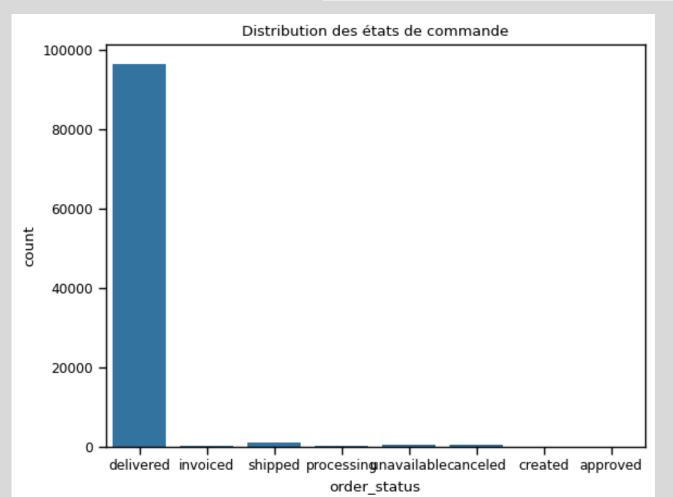

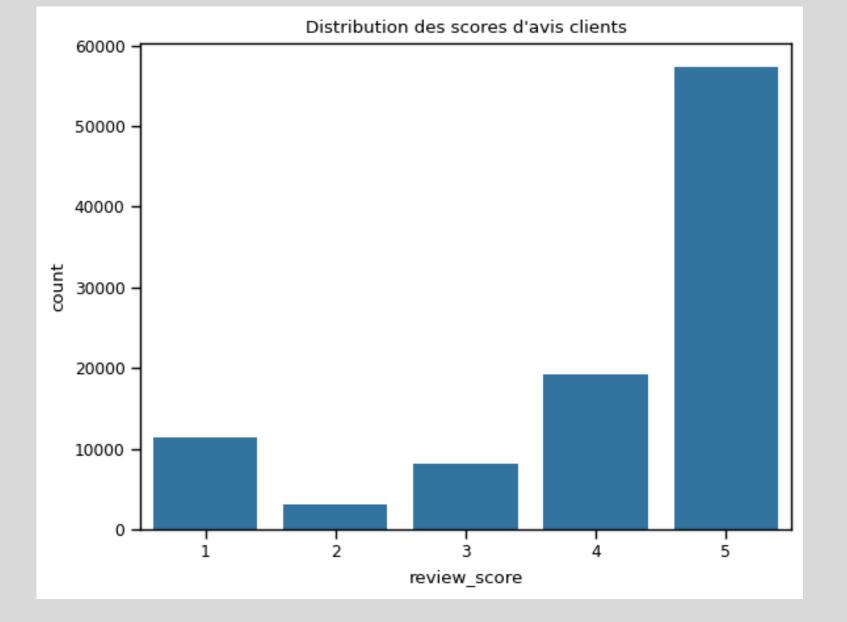

## 3. ANALYSE EXPLORATOIRE

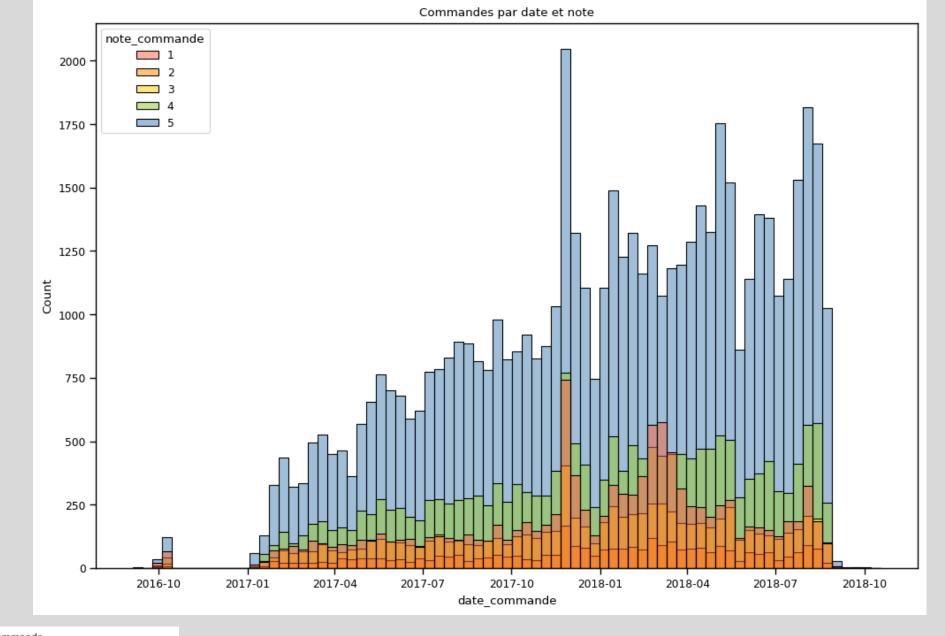

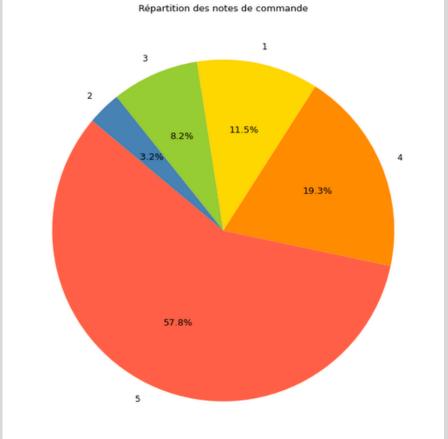

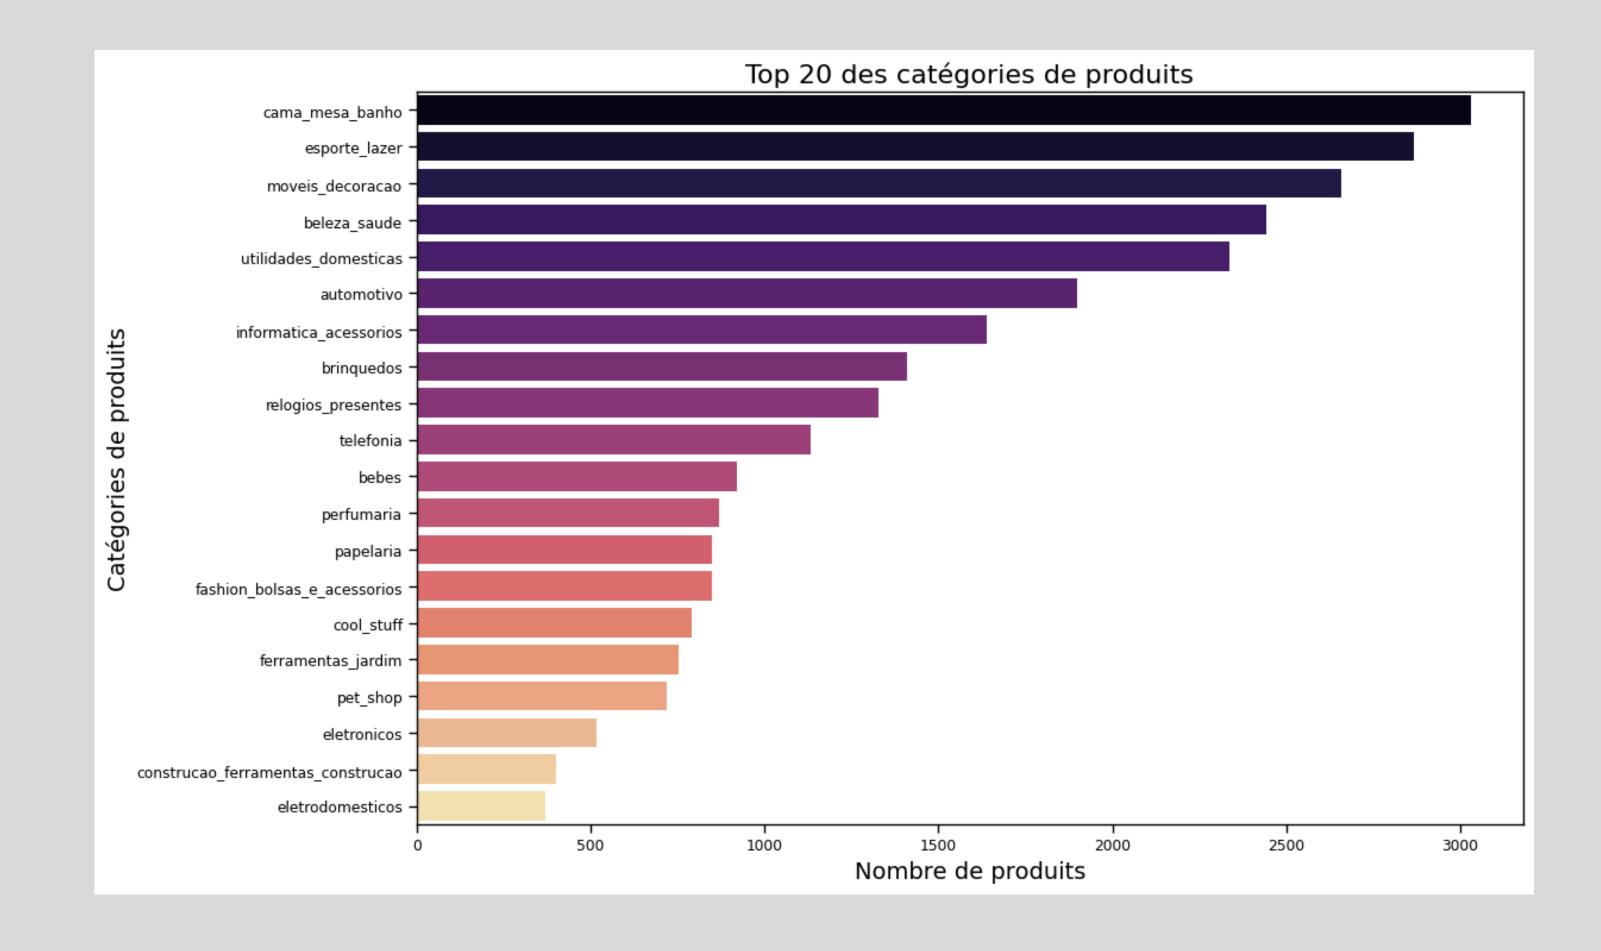

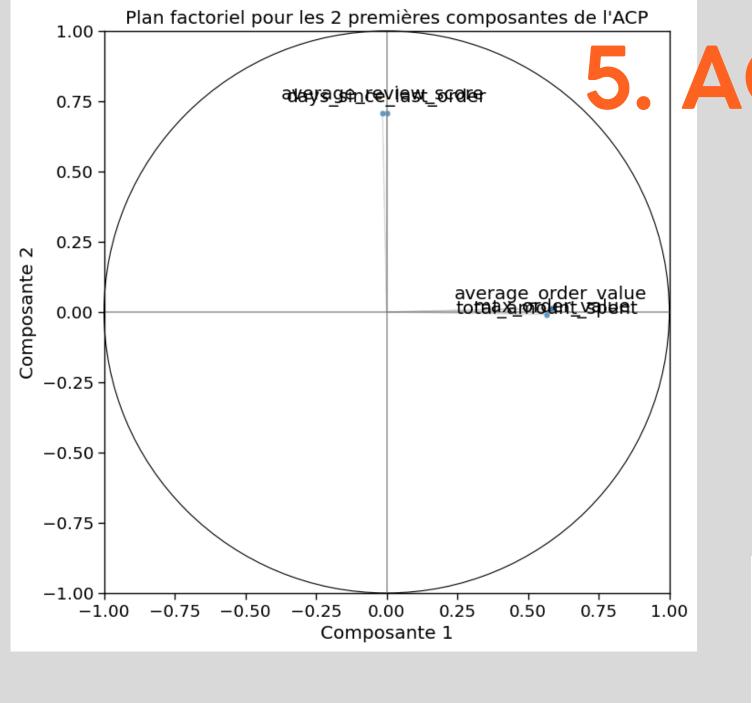

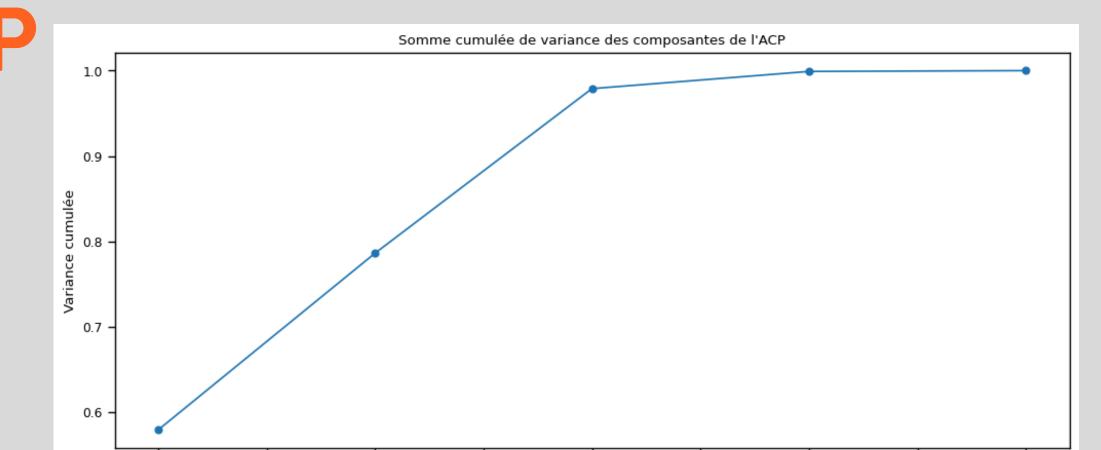

## 4. CREATION DU FICHIER CLIENT

- frequence
- days\_since\_last\_order
- first\_order\_date
- total\_amount\_spent
- average\_order\_value

- max\_order\_value
- average\_freight\_value
- most\_frequent\_payment\_type
  - average\_review\_score

customer_unique_id	frequence	total_amount_spent	average_review_score	days_since_last_order	first_order_date	average_order_value	max_order_value	average_freight_value	most_frequent_payment
0 0000366f3b9a7992bf8c76cfdf3221e2	1	129.90	5.0	6	2018-05-10 10:56:27	129.90	129.90	12.00	cred

1.5

2.0

2.5

## 6. ALGORITHME K-MEANS

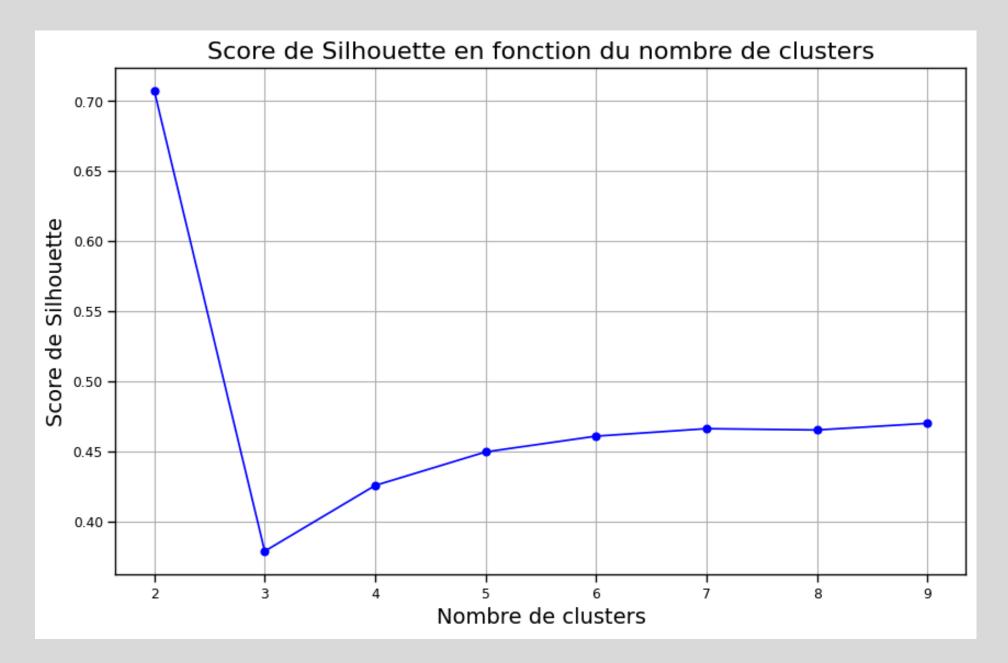

#### 6.1 Trouver l'optimum du nombre de clusters

- calcul des Scores de Silhouette
- l'Indice de Davies-Bouldin

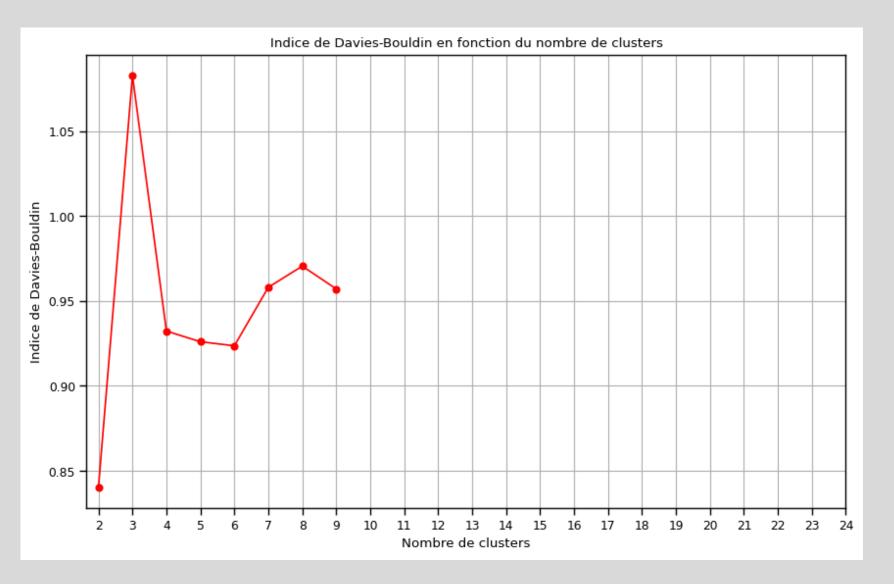

#### **6.2 STATISTIQUE DES CLUSTERS**

- La répartition des cluster
- La description des cluster

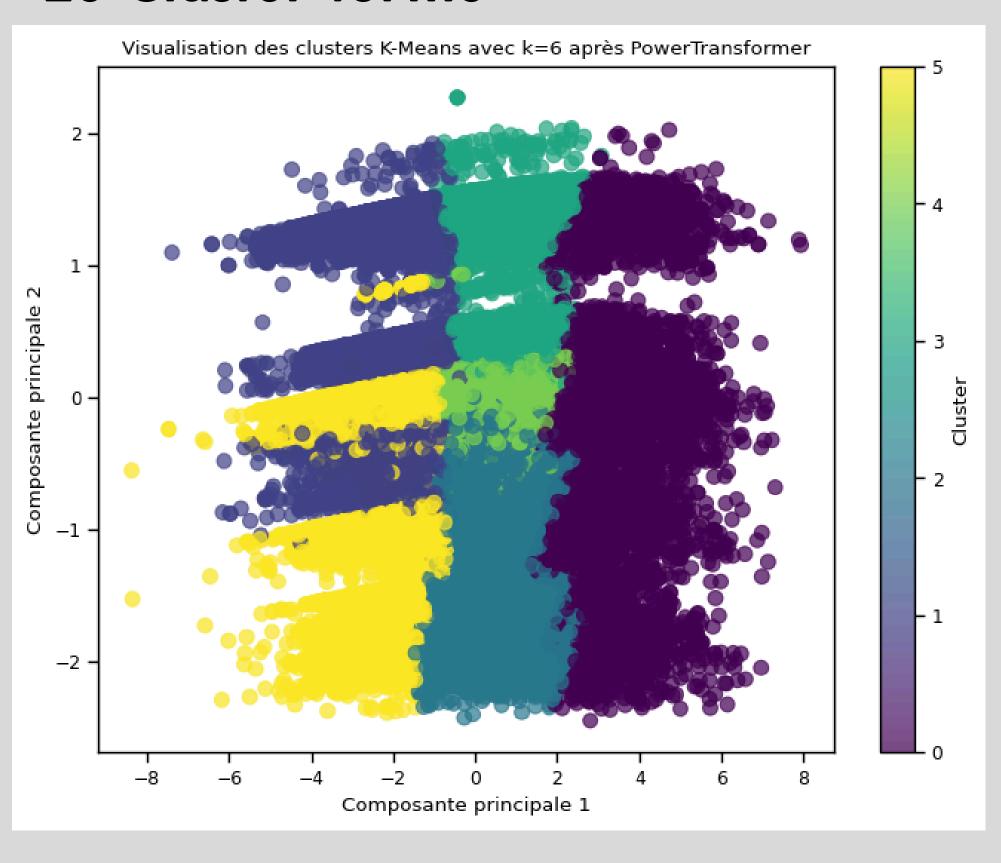

#### **SCORES DE SILHOUETTE**

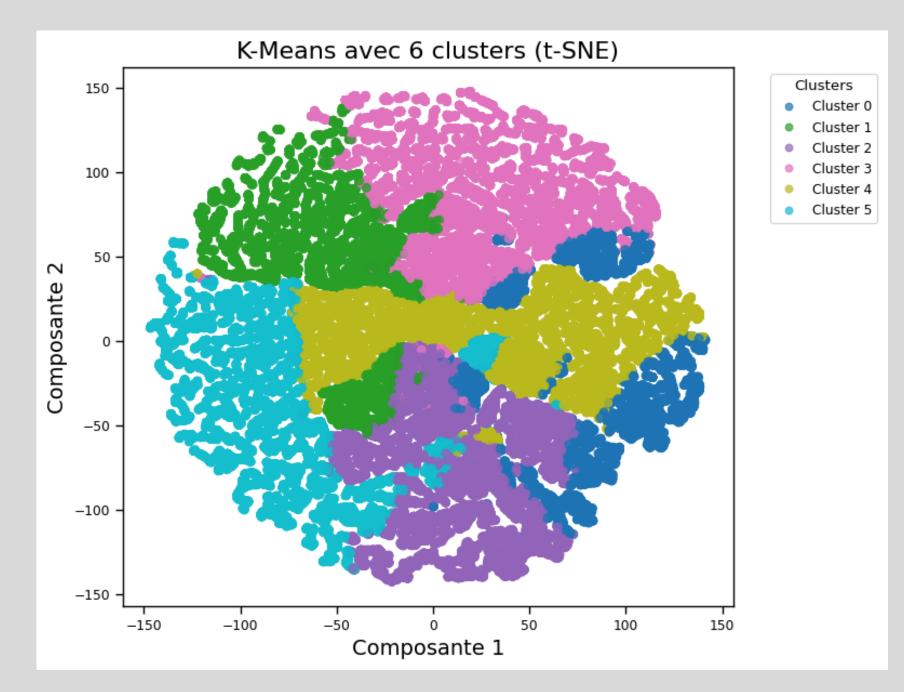

#### INDICE DE DAVIES-BOULDIN

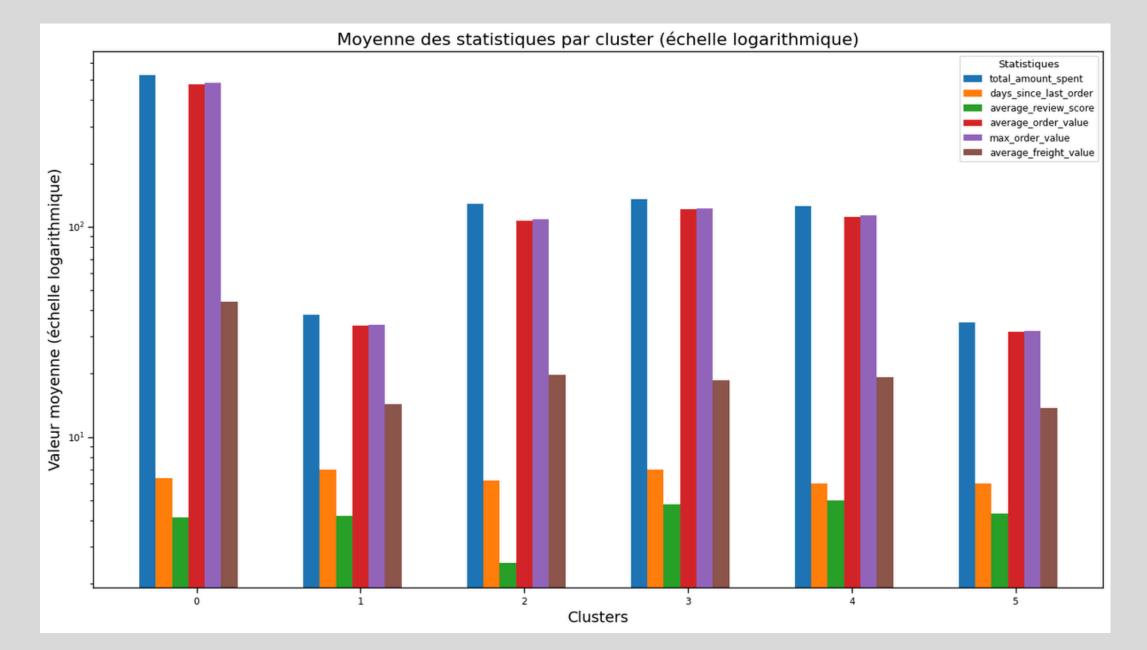

### Le Cluster formé

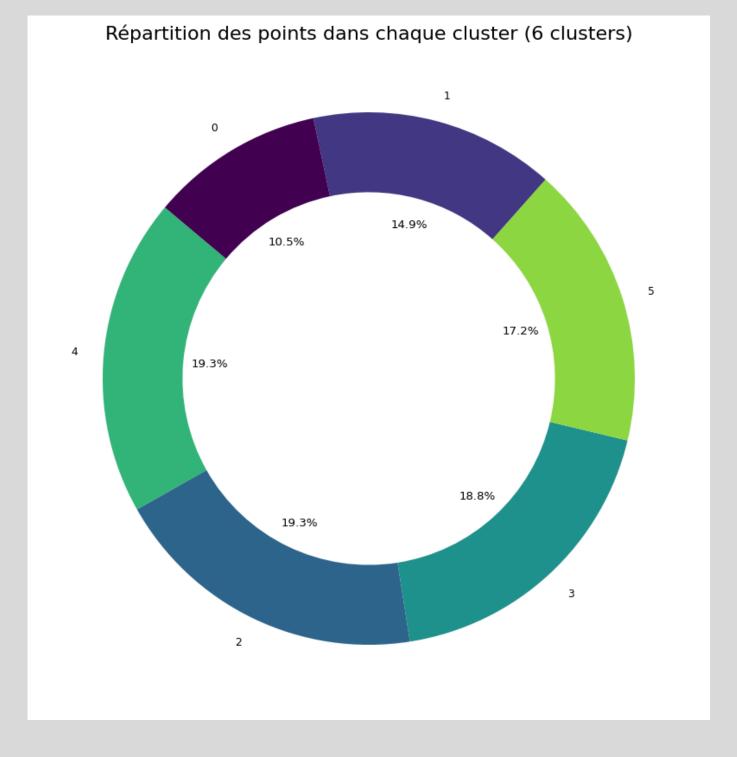

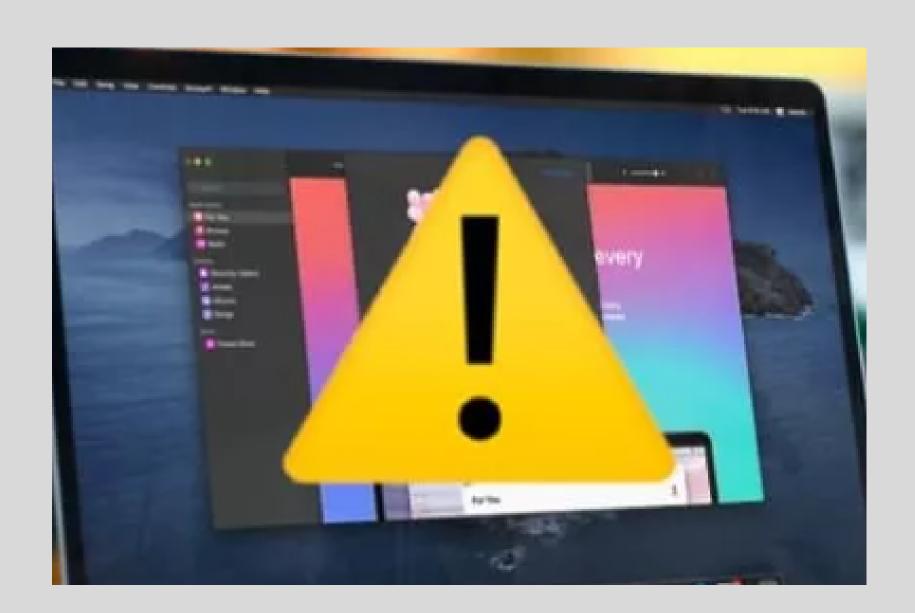

La répartition des cluster

```
cluster
4    18273
2    18271
3    17799
5    16271
1    14114
0    9989
Name: count, dtype: int64
```

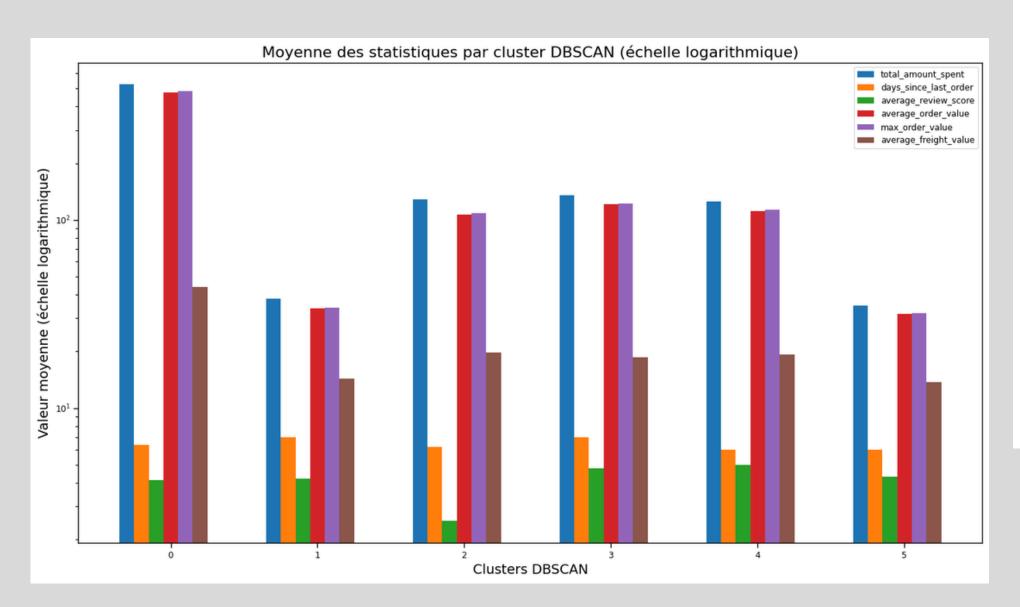

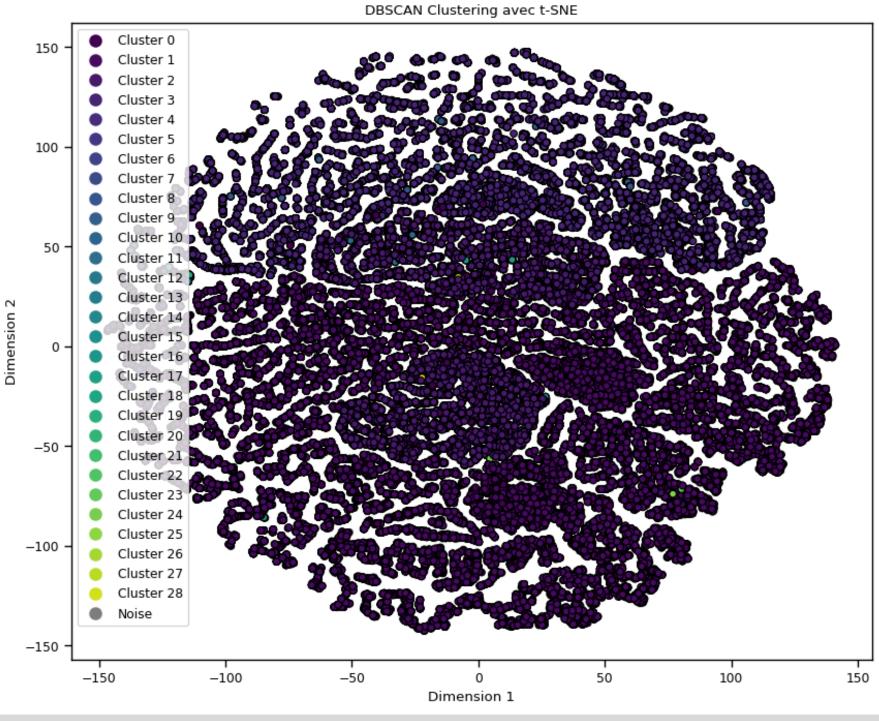

# 7. CLUSTERING HIÉRARCHIQUE

Non applicable en raison d'un problème de mémoire.

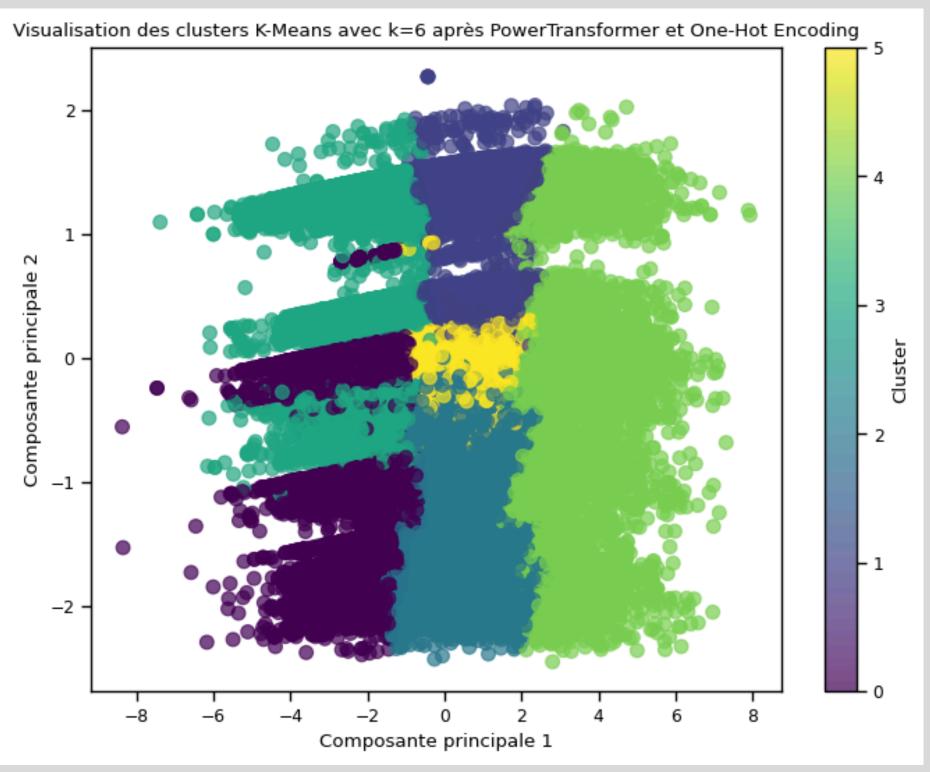

# 8. ALGORITHME DBSCAN

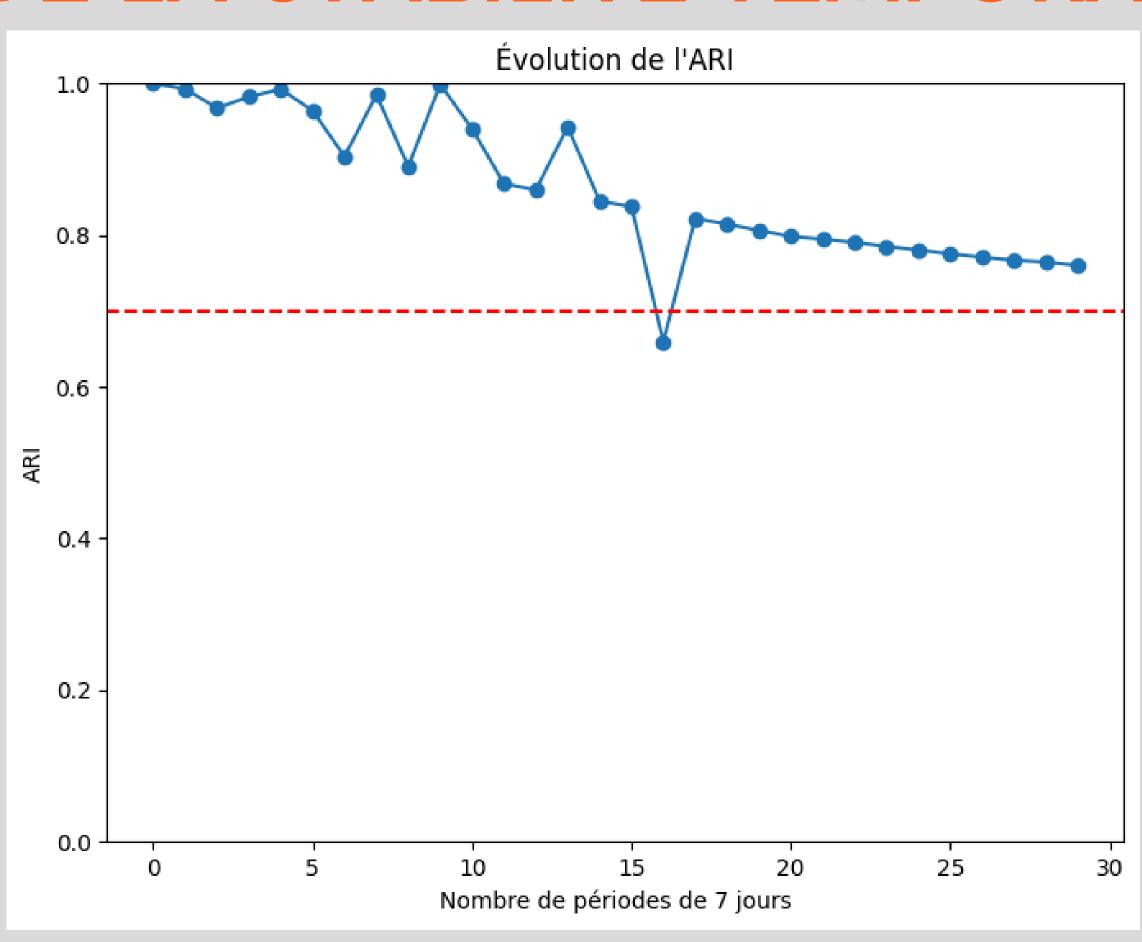

# 9. TESTER UN CLUSTERRING K-MEANS AVEC LES VARIABLE QUALITATIVES

```
Répartition des clusters
      18273
     18198
     17805
     16446
     14121
      9874
Name: count, dtype: int64
```

# ETUDE DE LA STABILITÉ TEMPORAIRE

## CONCLUSION

SEGMENTATION IDENTIFIÉE

• IMPACT SUR L'ÉQUIPE MARKETING

SUIVI DE LA SATISFACTION CLIENT

• FRÉQUENCE DE MISE À JOUR
